INTRODUCTION:

PROJECT NAME

McLinden Residence
5564 E. Palo Verde Lane
Paradise Valley, AZ 85253

PROJECT TYPE/SIZE

This project involves the removal of the existing house and construction of a new main residence along with a casita on the above referenced lot.

LOCATION

This 1.15 net acre of land is located at the cul-de-sac that forms the end of E. Palo Verde Lane in Paradise Valley. The site is bounded on the east, south, west and north by existing residential properties with the exception with the existing cul-de-sac located in the northwest corner of the lot. The site located in the northeast quarter of Section 17, Township 2 North, Range 4 East of the Gila and Salt River Base and Meridian, Maricopa County, Arizona.

OBJECTIVES:

The following Drainage Report with calculations is intended to define the drainage concepts for the construction of a new private residence on 1.154 net acre of land.

This report will provide on site retention capable of containing the 100 year, 2 hour storm in compliance with the Town of Paradise Valley design criteria with supporting documentation.

The results will be incorporated into the final Grading & Drainage Plan. The Grading & Drainage Plan will show the proposed finished floor elevation for the new residence that will be protected from flooding caused by a 100 year storm.

NARRATIVE:

This project involves the removal of the existing house and construction of a new main residence along with a casita on the above referenced lot. This 1.15 net acre of land is located at the cul-de-sac that forms the end of E. Palo Verde Lane in Paradise Valley. The site is bounded on the east, south, west and north by existing residential properties with the exception with the existing cul-de-sac located in the northwest corner of the lot. The site located in the northeast quarter of Section 17, Township 2 North, Range 4 East of the Gila and Salt River Base and Meridian, Maricopa County, Arizona.

The lot is located on the north slopes of Camelback Mountain and has a site slope across the lot of 10%. There are 2 existing washes that are located on the east side and the west side of this lot. The easterly wash, "A" drains an area of 32.47 acres with a 100 year flow of 159.30 c.f.s. The westerly wash, "B" drains an area of 0.96 acres with a 100 year flow of 6.19 c.f.s. The flow in both washes is contained within the existing banks and does not impact the new house.

On site retention calculations are shown on page 6. Using a 100 year precipitation rate of 2.82 inches and a "C" value of 0.10 (post – pre) the required retention is 1,181 cubic feet with 1,448 cubic feet provided. A small one foot deep retention basin is shown in the northwest corner of the lot and is sized to contain the runoff. The basin will drain in 36 hours by a combination of ground percolation and evaporation.

The site is located in flood zone "X" as shown on the attached FIRM, map number 04013C1765L, dated October 16, 2013 and is not impacted by any offsite flows.

The NOAA, Atlas 14 point precipitation frequency estimate chart is shown in the back of this report. The 100 year, 2 hour storm precipitation is 2.25 inches. Per the requirement of Paradise Valley the 100 year, 2 hour storm precipitation value used in this report is 2.82 inches.

VICINITY MAP:

DRAINAGE AREA OF LOT

1. Area = 50.256 s.f.
2. Weighted "C" value = Pre – Post construction = $(0.45 - 0.35) = 0.10$
3. P = 2.82 inches
4. $\text{Vol}_{\text{Req.}} = (50,256) (0.10) (2.82 / 12) = 1,181 \text{ c.f.}$
5. Volume provided in retention basin #1, @ 1.00' feet of depth: = 1,448 c.f.
6. Dry Up Calculations:

Since the basin is less than 1 foot in depth, it will drain by a combination of ground percolation and evaporation.

OFF SITE RUNOFF CALCULATIONS, EASTERLY WASH, “A”

1. Off Site Drainage Area = 1,414,451 s.f. = 32.47 acres
2. “C” = 0.85
3. Time of concentration was determined using the formula:

$$T_c = 11.4 L^{0.5} K_b^{0.52} S^{-0.31} i^{-0.38} \text{ where:}$$

$$L = 2,100 \text{ ft} = 0.397 \text{ miles}$$

$$K_b = m \log A + b, \text{ where } m = -0.03000, A = 32.47 \text{ and } b = 0.20$$

$$K_b = 0.1547$$

$$\text{Elevation change} = 2540.00 - 1460.00 = 1,080.00 \text{ feet}$$

$$S = 1,080.00 / 0.398 = 2,715$$

$$T_c = 11.4 (0.397)^{0.5} (0.1547)^{0.52} (2,715)^{-0.31} i^{-0.38}$$

$$T_c = 0.2346 i^{-0.38}$$

<u>NOAA, ATLAS 14</u>	<u>PT. RAINFALL, IN.</u>	<u>PT. RAINFALL, IN/HR</u>
100 year, 5 minute	0.632	7.584
100 year, 10 minute	0.962	5.772
100 year, 15 minute	1.19	4.76
100 year, 30 minute	1.61	3.22
100 year, 1 hr.	1.99	1.99

ITERATIONS

Try rainfall intensity of 5.772 in/hr. for $T_c = 10$ minutes

$$T_c = 0.2346 (5.772)^{-0.38} = 0.159 \text{ hr.} = 9.55 \text{ minutes, delta} = 0.45 \text{ minutes}$$

Try rainfall intensity of 4.76 in/hr. for $T_c = 15$ minutes

$$T_c = 0.2346 (4.76)^{-0.38} = 0.130 \text{ hr.} = 7.78 \text{ minutes, delta} = 7.22 \text{ minutes}$$

Use rainfall intensity of 5.772 in/hr. for $T_c = 10$ minutes

$$Q_{(100) \text{ existing}} = (C) (I) (A) = (0.85) (5.772) (32.47 \text{ ac.}) = 159.30 \text{ c.f.s.}$$

OFF SITE RUNOFF CALCULATIONS, WESTERLY WASH, “B”

1. Off Site Drainage Area = 42,000 s.f. = 0.96 acres
2. “C” = 0.85
3. Time of concentration was determined using the formula:

$$T_c = 11.4 L^{0.5} K_b^{0.52} S^{-0.31} i^{-0.38} \text{ where:}$$

$$L = 275 \text{ ft} = 0.052 \text{ miles}$$

$$K_b = m \log A + b, \text{ where } m = -0.03000, A = 0.96 \text{ and } b = 0.20$$

$$K_b = 0.2005$$

$$\text{Elevation change} = 1508.00 - 1460.00 = 48.00 \text{ feet}$$

$$S = 48.00 / 0.052 = 922$$

$$T_c = 11.4 (0.052)^{0.5} (0.2005)^{0.52} (922)^{-0.31} i^{-0.38}$$

$$T_c = 0.1358 i^{-0.38}$$

<u>NOAA, ATLAS 14</u>	<u>PT. RAINFALL, IN.</u>	<u>PT. RAINFALL, IN/HR</u>
100 year, 5 minute	0.632	7.584
100 year, 10 minute	0.962	5.772
100 year, 15 minute	1.19	4.76
100 year, 30 minute	1.61	3.22
100 year, 1 hr.	1.99	1.99

ITERATIONS

Try rainfall intensity of 7.584 in/hr. for $T_c = 5$ minutes

$$T_c = 0.1358 (7.584)^{-0.38} = 0.063 \text{ hr.} = 3.77 \text{ minutes, delta} = 1.23 \text{ minutes}$$

Try rainfall intensity of 5.772 in/hr. for $T_c = 10$ minutes

$$T_c = 0.1358 (5.772)^{-0.38} = 0.070 \text{ hr.} = 4.19 \text{ minutes, delta} = 5.81 \text{ minutes}$$

Use rainfall intensity of 7.584 in/hr. for $T_c = 5$ minutes

$$Q_{(100) \text{ existing}} = (C) (I) (A) = (0.85) (7.584) (0.96 \text{ ac.}) = 6.19 \text{ c.f.s.}$$

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.
