

## Memo: Invergordon Road / Montessori Academy – Traffic Analysis

---

---

Date: 12/21/16  
TO: Chief Peter Wingert, Paradise Valley Police Department  
FROM: Eric Maceyko, P.E., PTOE  
Bryan A. Martin, P.E.

---

---

### **INTRODUCTION**

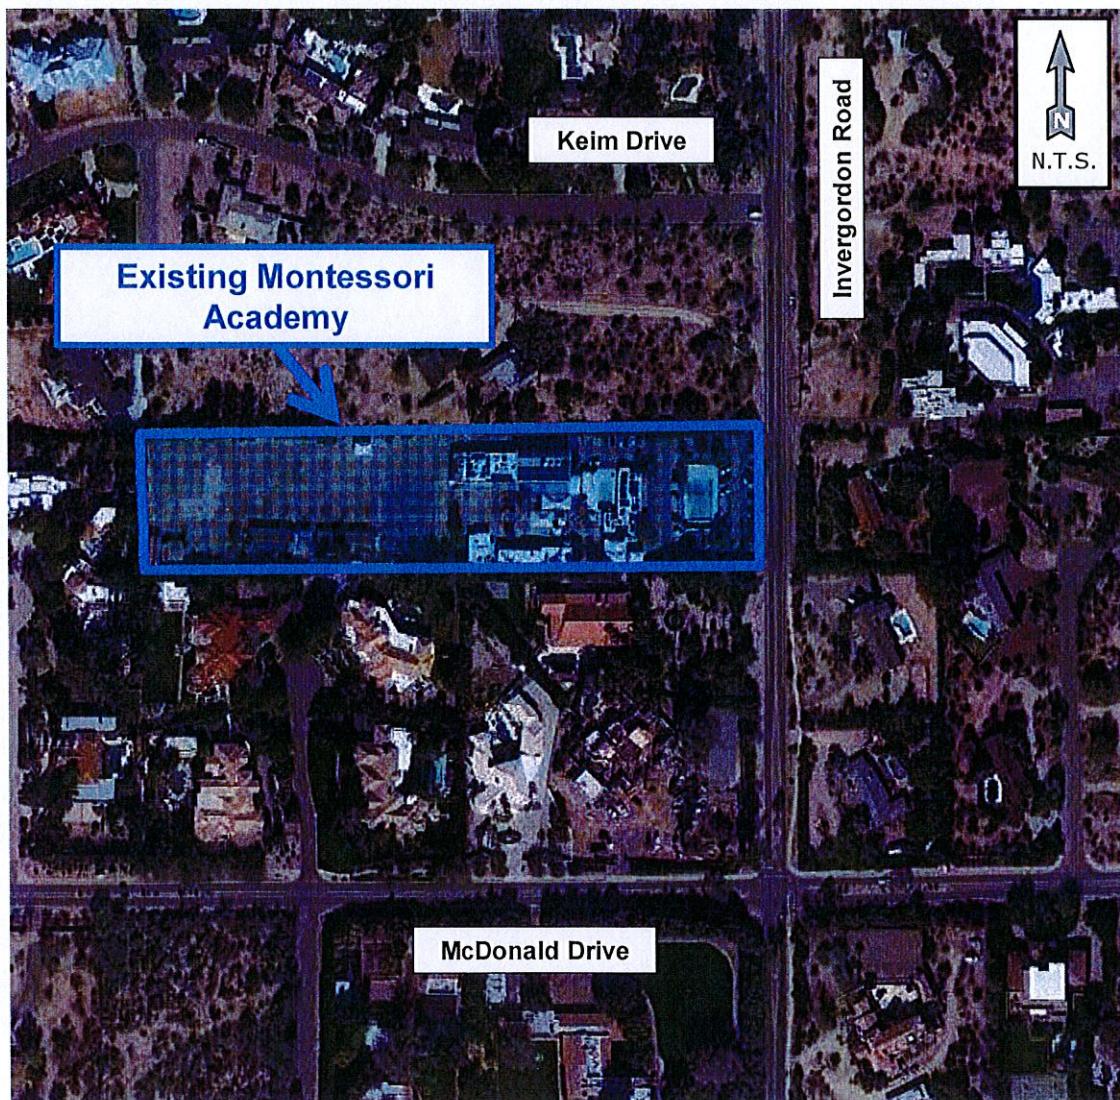

The Town of Paradise Valley is evaluating the travel speeds and potential for changes to the existing posted speed limit signing on Invergordon Road within the vicinity of the Montessori Academy. Montessori Academy is a private pre-school and public kindergarten to 8<sup>th</sup> Grade charter school with an enrollment of more than 200 students.

The school currently experiences a typical morning arrival and afternoon dismissal peak period of traffic generation. The current practice of the Montessori Academy is to place two (2) 15 mph speed limit signs in the center of Invergordon Road, one each in the northbound and southbound directions in advance of the school driveways during the peak arrival and dismissal hours.

EPS Group has been retained to conduct a Traffic Analysis to evaluate current traffic conditions and recommend the appropriate posted speed limit signing.

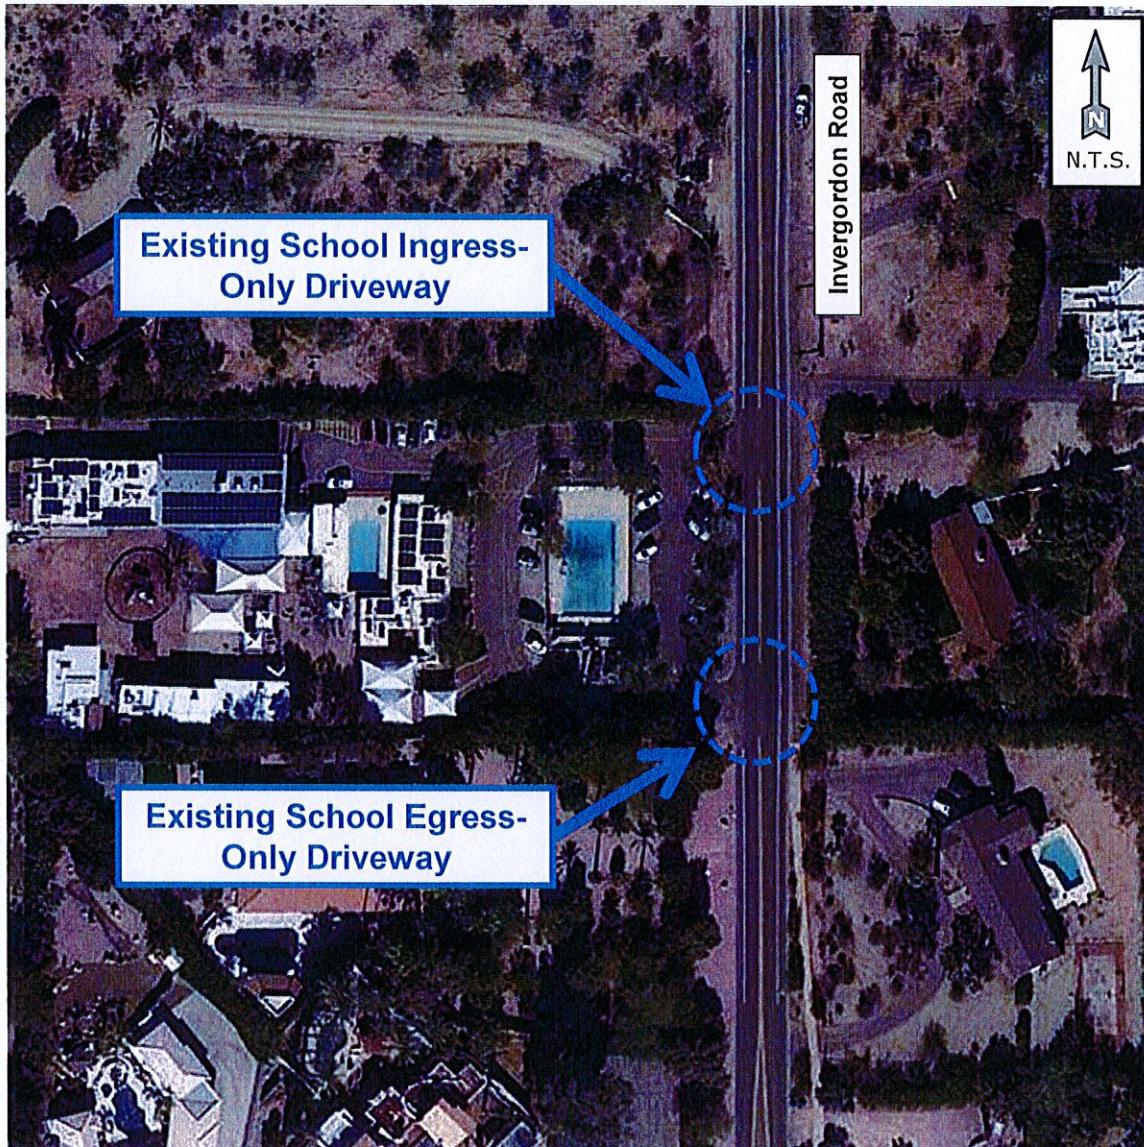

## **STUDY AREA**

**Figure 1** provides a map of the study area. The existing Montessori Academy is located on the west side of Invergordon Road approximately 500 feet north of McDonald Drive. Within the study area, Invergordon Road is a straight, flat undivided north-south roadway consisting of one travel lane in each direction with a posted speed limit of 35 mph. There are also bike lanes in both directions. A continuous sidewalk is only present on the east side of Invergordon Road and no school crossing currently exists.

**Figure 1: Study Area**

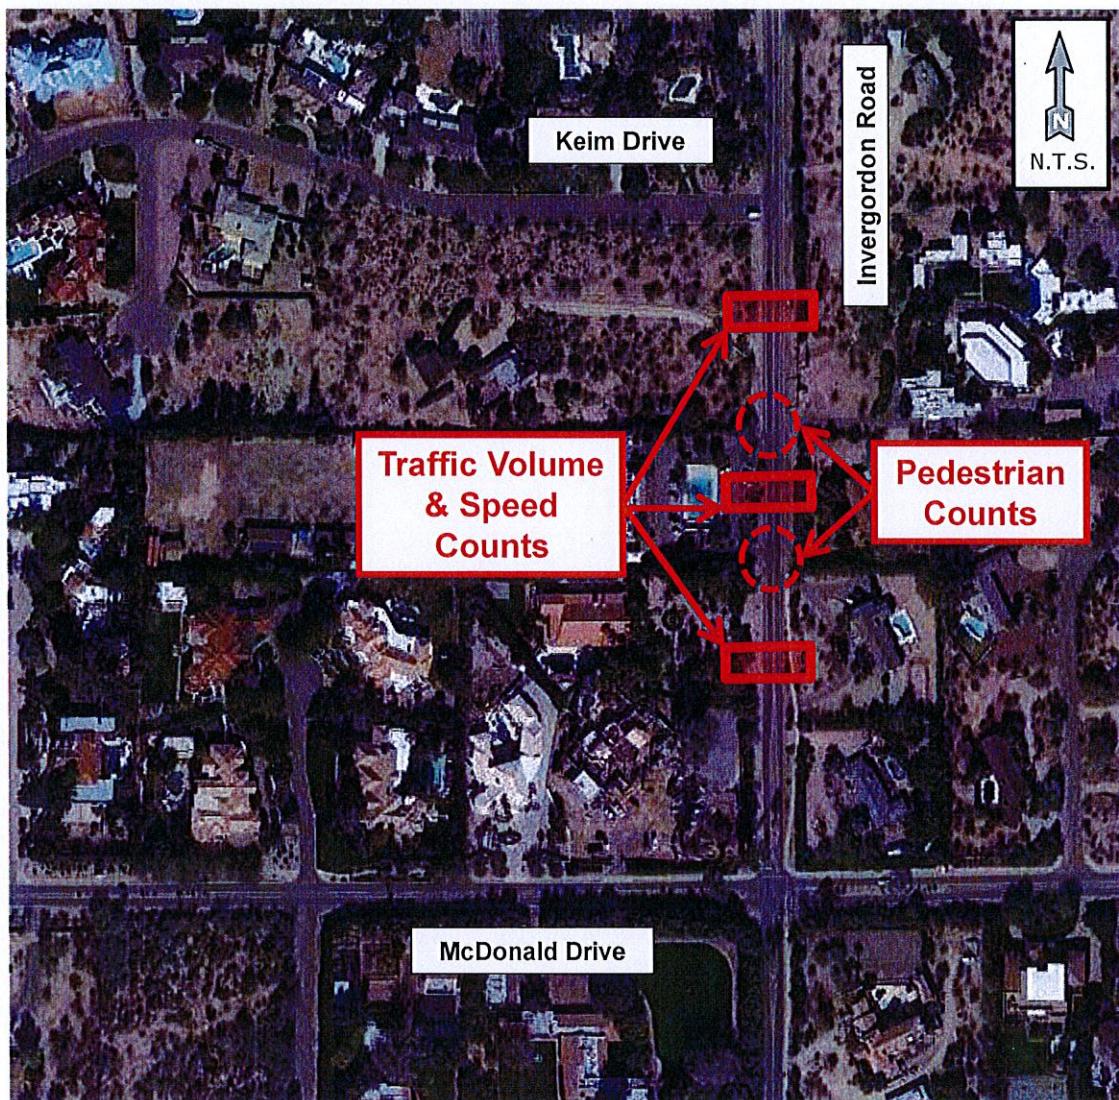

The existing Montessori Academy provides access to Invergordon Road via one (1) full access ingress-only driveway to the north and one (1) full access egress-only driveway to the south. The driveways are separated by a distance of approximately 160 feet. No right or left-turn deceleration lanes are present for either access. There is an offset driveway on the east side of Invergordon Road just north of the Montessori Academy ingress-only driveway. This driveway serves the Calvary Church of the Valley property. **Figure 2** provides a close-up view of the current school access on Invergordon Road.

**Figure 2: Current School Access**

## **TRAFFIC DATA**

Current traffic volume and travel speed data was collected for a 24-hour period on Tuesday, 15 November 2016. The peak hours of traffic on Invergordon Road generally occurred from 8:00 to 9:00 AM and 5:00 to 6:00 PM. The designated school drop-off time is from 8:00 to 8:30 AM, and pick-up times are from 2:50 to 3:15 PM and 3:30 to 3:45. Therefore, peak hour pedestrian counts were also conducted on Tuesday, 15 November 2016 from 7:45 to 8:45 AM, and from 2:45 to 3:45 PM. **Figure 3** depicts the traffic data measurement locations. **Attachment A** provides the traffic count data. **Attachment B** provides the pedestrian count data.

**Figure 3: Traffic Data Measurement Locations**

The resulting 24-hour, morning peak hour, and evening peak hour traffic volumes for Invergordon Road are summarized in **Table 1**. The morning peak hour of the school coincides with the morning peak hour of Invergordon Road traffic. The evening peak hour of the school occurs earlier than the evening peak hour of Invergordon Road traffic. Therefore, an additional school evening peak hour has been included in the table for use in the traffic analysis.

**Table 1: Existing Traffic Volume Results**

Time Period	Invergordon Road, South of School	Invergordon Road, Adjacent to School	Invergordon Road, North of School
Day (24 Hours)	6,955	6,720	7,013
AM Peak Hour	578	551	596
PM (School) Peak Hour	476	415	470
PM Peak Hour	695	678	716

The typical maximum capacity of a two-lane undivided roadway such as Invergordon Road is approximately 8,500 vehicles per day per lane. Therefore, the current traffic volumes are at less than 50% of the typical maximum capacity. This level of excess capacity can encourage high travel speeds.

The average travel speed data results are summarized in **Table 2**.

**Table 2: Average Travel Speed Results**

Time Period	Invergordon Road, South of School	Invergordon Road, Adjacent to School	Invergordon Road, North of School
Day (24 Hours)	31 mph	31 mph	35 mph
AM Peak Hour	21 mph	21 mph	25 mph
PM (School) Peak Hour	25 mph	25 mph	29 mph
PM Peak Hour	33 mph	33 mph	38 mph

**Table 3** includes the total percentage of vehicles traveling at speeds greater than the currently posted 35 mph speed limit.

**Table 3: Percentage Excess Speed Results**

Time Period	Invergordon Road, South of School	Invergordon Road, Adjacent to School	Invergordon Road, North of School
Day (24 Hours)	24.9%	30.1%	44.2%

The data indicates that Invergordon Road, north of Montessori Academy, currently experiences the highest amount of traffic and highest average speeds. It can also be seen that there is a significant reduction in average speeds at each of the three (3) locations during the morning and school evening peak hours when compared to the overall day and evening peak hour of traffic on Invergordon Road. Additionally, a significant portion of drivers are exceeding the posted speed limit at all three (3) locations.

## **TRAFFIC ANALYSIS**

Arizona State Traffic Law allows local authorities within their respective jurisdictions to determine or change the maximum speed limit on any part of a street or highway based on an engineering and traffic investigation (Arizona Revised Statutes, Section 28-703). **Attachment C** includes a copy of the pertinent excerpts of Arizona Revised Statutes. These studies are to be completed in compliance with the Manual on Uniform Traffic Control Devices (MUTCD, 2009 Edition, Section 2B-13) and the adopted state standards for traffic control devices.

The goal of a posted speed limit is to ensure safety and efficiency by reducing travel speed disparity. When vehicles are traveling at substantially different speeds, driver discomfort and collision potential increase. Driver uncertainty with potential vehicle movement on the same street or intersecting streets and driveways also increases. Mandatory speed limits have greater purposes than limiting the maximum travel speed. They are also intended to accommodate driver travel speed preference to improve efficiency and ensure safety.

The MUTCD lists six factors for consideration in determining speed limits – 85<sup>th</sup> Percentile Speed, Road Characteristics, Pace Speed, Roadside Development and Environment, Parking Practices and Pedestrian Activity, and Crash Experience. However, other criteria may require a more conservative speed limit established by engineering judgement that supersedes a speed limit based on these statistics alone. The following sections provide an analysis of each factor.

### ***85<sup>th</sup> Percentile Speed:***

The primary consideration provided in the MUTCD for determining the posted speed limit is the 85<sup>th</sup> percentile speed. This statistic represents the speed at which 85% of the vehicles are traveling at or below and 15% are traveling above. This is the prevailing speed of the vehicles traveling on the segment of roadway. **Table 4** provides the 85<sup>th</sup> percentile speed for the measured locations.

**Table 4: 85<sup>th</sup> Percentile Speed Results**

Time Period	Invergordon Road, South of School	Invergordon Road, Adjacent to School	Invergordon Road, North of School
Day (24 Hours)	38 mph	39 mph	48 mph
AM Peak Hour	35 mph	32 mph	33 mph
PM (School) Peak Hour	36 mph	36 mph	44 mph
PM Peak Hour	38 mph	39 mph	49 mph

As can be seen in **Table 4**, the 85<sup>th</sup> percentile speeds generally fall within the recommended 5 mph range from the posted speed limit, except on Invergordon Road north of the school. This segment experiences an 85<sup>th</sup> percentile speed of more than 10 mph from the posted speed limit on average. It can also be seen that there is a significant reduction in 85<sup>th</sup> percentile speeds at each of the three (3) locations during the morning and school evening peak hours when compared to the overall day and evening peak hour of traffic on Invergordon Road. The difference appears to be more pronounced during the morning peak hour which coincides with a higher ambient volume of traffic on Invergordon Road.

#### *Road Characteristics:*

Invergordon Road consists of pavement, curb, gutter, and sidewalk on the east side of the road. All appear in reasonably good condition with clearly visible pavement markings. The alignment of the road is straight with no significant vertical or horizontal alignment. Sight distance also appears adequate with no obvious obstructions or intersection alignment issues. There is landscaping present on both sides of Invergordon Road. The landscaping should be regularly monitored to ensure adequate sight distance is maintained.

#### *Pace Speed:*

The 10 mph pace speed is a secondary consideration suggested by the MUTCD. This speed is the 10 mph range of speeds that includes the largest number of vehicles. **Table 5** presents the 10 mph pace speeds at the study locations.

**Table 5: Pace Speed Results**

Time Period	Invergordon Road, South of School	Invergordon Road, Adjacent to School	Invergordon Road, North of School
Day (24 Hours)	31 - 40 mph	31 - 40 mph	26 - 35 mph

Typically a posted speed limit within the 10 mph pace speed, and close to the 85<sup>th</sup> percentile speed coincides with the lowest collision rate due to a subsequent reduction in the range of vehicle travel speeds. Therefore, the posted speed limit generally should be within the 10 mph pace speed, unless additional considerations necessitate a lower speed limit. The posted speed limit falls within the 10 mph pace speed at all three (3) locations.

*Roadside Development and Environment:*

Adjacent land uses consist primarily of low density single-family residences. Some residences have direct access to Invergordon Road and some have indirect access via local collector road intersections. Direct access is present more within the vicinity of the school and McDonald Drive, with indirect access present more to the north of the school.

Invergordon Road provides continuous bike lanes northbound and southbound, and a pedestrian sidewalk on the east side of the road only. There are no marked crosswalks for the school or at any other mid-block location.

*Parking Practices and Pedestrian Activity:*

There is no dedicated parking on Invergordon Road within the study area. There are no posted parking restrictions, and no parking activity was observed. Onsite parking and circulation areas provided by the school appear adequate.

The pedestrian count data is summarized in **Table 6**.

**Table 6: Pedestrian Count Results**

Time Period	School Ingress Driveway, North	School Egress Driveway, South
AM Peak Hour	4	3
PM (School) Peak Hour	1	3

As can be seen from **Table 6**, pedestrian activity related to the Montessori Academy is minimal, as is typical of charter schools. Furthermore, it should be noted that of the counts presented in **Table 6**, only two (2) pedestrians were recorded crossing Invergordon Road.

The *Arizona Department of Transportation Traffic Safety for School Areas Guidelines* states the following:

"A School Crossing shall not be installed where the school age pedestrian volume is 10 or fewer."

An official school crossing, as defined by the guidelines, is not recommended based on the low volume of crossing maneuvers.

*Crash Experience:*

The Paradise Valley Police Department provided historical crash data for Invergordon Road within the vicinity of the Montessori School. Data was collected for the past five years (2012 to 2016) where data was available. The following results were reported:

- Four (4) crashes occurred on Invergordon Road adjacent to the school, and two (2) crashes occurred on Invergordon Road near but not adjacent to the school between 2012 and 2014.
- Three (3) crashes occurred at the Invergordon Road / McDonald Drive intersection between 2015 and 2016.

Evaluation of the crash data does not indicate a significant amount of crashes present during the past five year period.

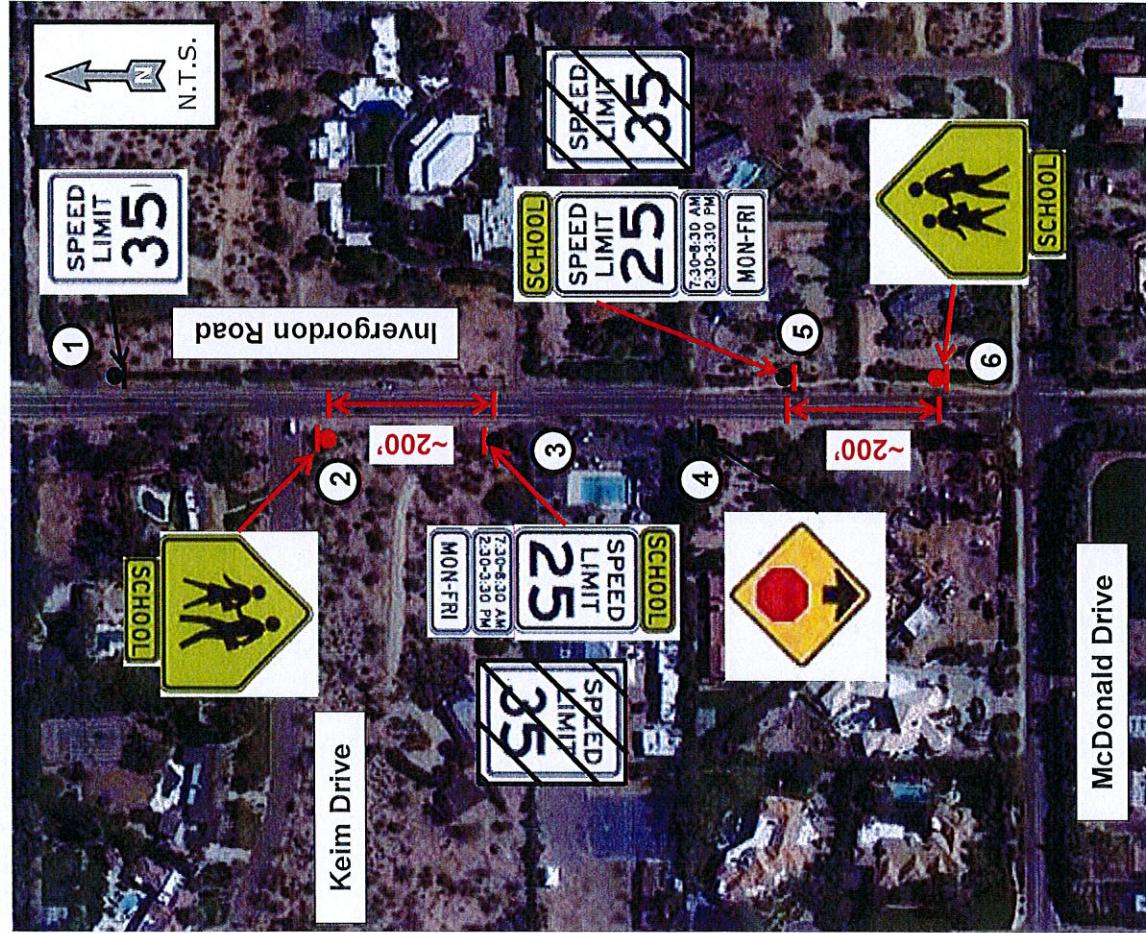

## **RECOMMENDATIONS**

Typically drivers attempt to travel close to the posted speed limit. When drivers believe that a posted speed is unreasonably low, often they will ignore the posted speed limit and travel much faster. Based upon the collected traffic data and analysis, the posted speed limit of 35 mph on Invergordon Road appears appropriate. Reducing the speed limit would increase the gap between the existing travel speeds and the posted speed limit. However, the amount of vehicles in excess of the current posted speed limit does appear to be significant. Therefore, consideration of traffic calming measures to reduce the speeds is recommended.

The current 15 mph speed limit signs placed in the center of Invergordon Road by the Montessori Academy during the peak arrival and dismissal hours do not comply with the current MUTCD standards, nor is this type of sign recommended to be used per ADOT's school safety guidelines. As reflected in the data, the placement of the signs by the school does appear to significantly reduce vehicular speeds within the vicinity of the school during the peak arrival and dismissal hours. The observed impact was greater during the morning peak hour when ambient Invergordon Road traffic volumes were higher.

Therefore, it is recommended to implement enforceable permanent signing enhancements to designate a reduced speed zone in the vicinity of the school during the peak hours. Based on the traffic data, and statutory guidance that adjacent speed limits not have more than a 10 mph difference, a speed reduction to 25 mph is recommended during school peak hours.

**Figure 4** provides a schematic diagram of the recommended signing improvements. Optional plaques are shown on the figure that should be considered to provide additional guidance, but are not mandatory. The time periods on the S4-1P plaque can be adjusted as necessary. In addition, flashing light speed display signs can also be considered. Flashing light speed display signs have proven effective in reducing travel speeds. The travel speeds of the lights would flash when vehicles exceed the posted speed limit.

## LEGEND

- ① Existing R2-1 (35 MPH) Sign to Remain
- ② New S1-1 (36"x36") and Optional S4-3P (24"x8") Plaque on New Post
- ③ Replace Existing R2-1 (35 MPH) Sign with New S4-3P (24"x8"), New R2-1 (24"x30") and Optional S4-1P (24"x10") and / or Optional S4-6P (24"x10") on Existing Post
- ④ Existing W3-1 Sign to Remain
- ⑤ Replace Existing R2-1 (35 MPH) Sign with New S4-3P (24"x8"), New R2-1 (24"x30") and Optional S4-1P (24"x10") and / or Optional S4-6P (24"x10") on Existing Post
- ⑥ New S1-1 (36"x36") and Optional S4-3P (24"x8") Plaque on New Post

Note: Actual installation locations of new posts to be field adjusted as necessary to provide adequate visibility and clearance. Reuse of existing posts and foundations to be field verified for viability and appropriate mounting height.

**Figure 4: Recommended Signing Enhancements**

Please contact me at (480) 503-2250, extension 125 if you have any questions or would like to discuss this memorandum.

**ATTACHMENTS:**

- A. Existing Traffic Counts
- B. Existing Pedestrian Counts
- C. Pertinent Excerpts from Arizona Revised Statutes

Expires: 6/30/2017

[ARS TITLE PAGE](#) [NEXT DOCUMENT](#) [PREVIOUS DOCUMENT](#)

**28-703. Alteration of speed limits by local authority**

A. If a local authority determines on the basis of an engineering and traffic investigation that the maximum speed permitted under this article is greater or less than is reasonable or safe under the conditions found to exist on any part of a street or highway in its jurisdiction, the local authority may determine and declare a reasonable and safe maximum speed limit at the location and, based on the investigation, may:

1. Decrease the limit at intersections.
2. Increase the limit within any business or residence district to not more than sixty-five miles per hour.
3. Decrease the limit outside any business or residence district.
4. Increase or decrease the limit on streets that are adjacent to or otherwise surrounding school grounds or public parks.

B. A local authority shall determine by an engineering and traffic investigation the proper maximum speed for all arterial streets in its jurisdiction and shall declare a reasonable and safe maximum limit on the arterial streets in its jurisdiction that may be more or less than the maximum speed permitted under this article for a business or residence district.

C. A local authority may decrease the limit to not less than fifteen miles per hour on an unpaved street or road within any district in its jurisdiction if the local authority determines that the limit is necessary to achieve or maintain national ambient air quality standards.

D. An altered limit established as provided for in this section is effective at all times, or during hours of darkness, or at other times as may be determined if appropriate signs giving notice of the altered limit are erected on the street or highway.

E. The alteration of maximum speed limits on state highways or extensions of state highways in a municipality by a local authority is not effective until the director approves the alteration.

F. A local authority shall not make more than six alterations per mile along a street or highway pursuant to this section, except for reduced limits at intersections. The difference between adjacent limits shall not be more than ten miles per hour except for school crossings.
