

May. 8, 2019

To The Paradise Valley Hillside Committee:

A rooftop photovoltaic solar panel installation is proposed at 5678 E Cheney Drive Paradise Valley AZ 85253. Below is a built point summary of the work we propose. Also attached are reference drawings, photographs and other information to facilitate the review process.

- 83 black trimmed solar panels to be installed on two sections on a flat roof.
- All solar panels shall be mounted so no portion of any panel or railing shall extend above the surrounding parapets or be visible from the same or lower level elevations.
- All conduit will be painted to match the home, as well as all electrical equipment provided that it does not void the UL Listing, or Product Warranty.
- New electrical equipment shall be installed on the exterior of the residence next to the existing Service Panel (See PV2).
- New electrical equipment shall be mounted in a configuration that shields it visibly when viewed from N. Cheney Drive.

In the consideration of all these points, we ask that the Paradise Valley Hillside Committee grant approval to the enclosed Plan Set(s) so we may obtain a permit and construct the project as designed. Thank you.

Sincerely,

Christine Brown of Arizona Solar Concepts LLC
